# Sonograph Examinations

We would like to inform you that the range of medical examinations provided on the premises of the Savoy Westend hotel has been enlarged with special ultrasound examinations (sonography) performed by a physician-specialist on professional hi-tech equipment SonoAce X6.

A sonograph, or ultrasound examination is a painless medical procedure that uses high frequency ultrasonic sound waves to image soft tissues, abdominal organs, etc. Using this equipment makes it easier for the physician to diagnose a patient's condition and to suggest the most effective treatment.
